

TENAX MULTIMAT

Type: 030
Geomat

TENAX MULTIMAT are polypropylene erosion control geomats, designed for protection and growing of grass on slopes subject to surface erosion. TENAX MULTIMAT are three dimensional mats composed by extruded and bioriented polypropylene grids, laid one upon each another and tied up by means of a black polypropylene yarn. The three dimensional structure is purposely engineered for trapping a layer of topsoil, thus avoiding rainfall erosion by both sheltering the surface against the impact of raindrops and by restricting the movement of the soil particles. TENAX MULTIMAT can be easily installed and it does not require skilled personnel.

Typical applications

Roadway ditches; slope protection; storm and irrigation channels; lakes banks; landfill cover.
